

ASIF KALAM

Software Engineer

New Delhi | +91-964-392-9309 | asifkalam.2003@gmail.com | linkedin.com/in/asif-kalam-aa4b4924b

SUMMARY

Computer Science graduate (B.Tech, 2025) with hands-on experience building and shipping cloud-connected, service-based applications using Java, Python, Node.js, and AWS. Skilled in REST API design, backend development, and secure cloud infrastructure, with strong fundamentals in object-oriented programming, data structures, and operating systems. Presented research at ICCCNT 2025, IIT Indore, with experience designing scalable, production-style architectures. Looking to bring strong engineering fundamentals and cloud/backend development experience to a production software engineering team.

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, C, JavaScript, SQL

Software Engineering: Object-Oriented Programming, Data Structures & Algorithms, REST API Design, MVC Architecture, Backend Development, Git

Web & Backend: Node.js, Express.js, React.js, REST APIs, JSON, Socket.io

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, RDS, DynamoDB, CloudWatch, CloudFormation, VPC), Infrastructure Automation

Databases: MySQL, MongoDB, Amazon RDS, Amazon DynamoDB

Development Tools: Git, VS Code, Postman, AWS CLI

WORK EXPERIENCE

Cloud Engineer Intern — EduSkills

- Provisioned and configured 10+ AWS EC2 instances with custom VPC networking, improving deployment consistency and reducing environment provisioning time by ~40%.
- Managed 15+ S3 buckets with versioning and lifecycle policies, reducing storage costs by ~30% while maintaining data availability.
- Automated repeatable infrastructure setup using AWS CloudFormation templates, eliminating manual configuration errors across 3 environments.
- Audited IAM roles and security groups; identified and closed 12 unnecessary open ports, strengthening the security posture of deployed services.
- Monitored service health and resource utilization via CloudWatch dashboards, flagging 5 underutilised instances to support cost and reliability decisions.

PROJECTS

Cloud-Based E-Learning Platform

Node.js, React.js, MongoDB, AWS (EC2, S3, VPC, IAM, CloudFront, CloudWatch), Socket.io, JWT

- Designed and implemented a multi-role, service-based backend with protected REST APIs and JWT-based authentication, supporting distinct student and instructor workflows.
- Hosted backend services on AWS EC2 within a custom VPC, with static assets served via S3 and CloudFront — mirroring a production-style cloud deployment architecture.
- Applied IAM roles and security groups following least-privilege principles to control access between services.
- Optimised MongoDB schema with compound indexing and query projection, reducing average API response time from ~320 ms to under 200 ms.
- Built real-time functionality using Socket.io for live instructor-student interaction, and set up CloudWatch monitoring to track service health.

2048 Game — Browser-Based Web Application

JavaScript (Vanilla), HTML5, CSS3, MVC Architecture

- Designed and implemented a complete game engine from scratch using a strict MVC pattern, separating game state, rendering, and input handling for clean, maintainable, testable code.
- Built a custom tile-merging algorithm handling all directional moves and edge cases (chained merges, blocked tiles, win/lose detection), with real-time score tracking.
- Integrated the localStorage API for persistent, offline-capable best-score tracking with no backend dependency.

EDUCATION

B.Tech (Hons), Computer Science and Engineering — Cloud Computing & Virtualisation

2021 – 2025

Galgotias University, Greater Noida | CGPA: 7.4/10.0 | Coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks

Intermediate, CBSE

2019 – 2020

MK School of Excellence, Madanpur Khadar Ext, New Delhi

CERTIFICATIONS & ACHIEVEMENTS

- AWS Academy Cloud Foundations — Amazon Web Services
- Presented research — "Serverless E-Learning Platform," 16th ICCCNT 2025, IIT Indore
- Solved 100+ problems on LeetCode, HackerRank, and Codeforces
